

BATTERSEA CORTEN PLANTER

KBP-2000

KENT BATTERSEA PLANTER - KBP- 2000

The Kent Battersea Corten Planter KBP-2000 is made with 4mm thick steel to maximize vandal resistance. Along with this the Corten Steel is low maintenance due to the patina on the surface that gives the rust like appearance. The patina protects the steel underneath and is graffiti resistant as the patina forms a new layer due to oxidation. The Battersea Planter is 2000mm wide x 2000mm long and 900mm high, however, these measurements can be modified to requirement.

Features:

- Corten Steel
- Graffiti Resistant
- 4mm Thick Steel
- Low maintenance

Can be easily moved using a forklift

Kent Battersea Corten Planter KBP 2000;

L:2000mm, H:900mm, W:2000mm; Pre-Weathered Corten Steel; 4mmThick Wall;

Finishes

These Planters can be manufactured from:

- Grade 316L Stainless Steel
- Grade 304L Stainless
- Powder Coated
- Pre-Weathered Corten Steel
- Faux Imitation Corten

Bright Peened

Bright Satin

Satin Finish 320 Grit Polished

Shot Peened

Tiger Bronze

Imitation Corten

Antique Copper

Metallic Black

Pre-Weathered Corten

KENT BATTERSEA PLANTER - KBP- 2000

Maintenance

Stainless Steel Maintenance

Clean the stainless steel components using warm water with a mild detergent with a nonabrasive cloth or sponge. Heavier stains may require the use of a nylon-scouring pad or a stainless steel cleaner.

To remove paint or graffiti use a cloth and Alkaline or solvent paint strippers according to type of paint. In the case of a bead blasted finish, where abrasive cleaning is required, always use a random circular rubbing action with a cloth.

In the case of brushed finishes the surface consists of uniform fine 'scratches' running in one direction so where abrasive cleaning is required always use a straight back and forward rubbing action in the direction of the grain using soap and warm water.

Rust spots or 'tea stains' can occur on the surface of the material, these are normally caused by contamination from ordinary mild steel, particularly in areas where construction work has been undertaken. Such stains can be removed using Rust Remover 410.

In cases where the surface is severely stained because of severe environmental conditions or scratched due to misuse, it may still be possible to restore the original finish using chemicals such as Oxalic Acid solution. There are many stainless steel polishes available to enhance the surface finish.

Corten Steel Maintenance

Corten steel is similar in strength to Stainless Steel grade 304 and grade 316 – so similar thicknesses of edging can be interchanged on a project. There is a non-uniform patina on the surface that has a rust-like colour but in fact protects the steel below from corrosion. The patina makes it resistant to graffiti and stickers – and any future remedial work can disappear over time as the oxidation forms a new patina over these areas. As a result Corten should need no cleaning regime after installation.
