

# Street Furniture - Product Code: Kent Waiting Shelter KWS6600

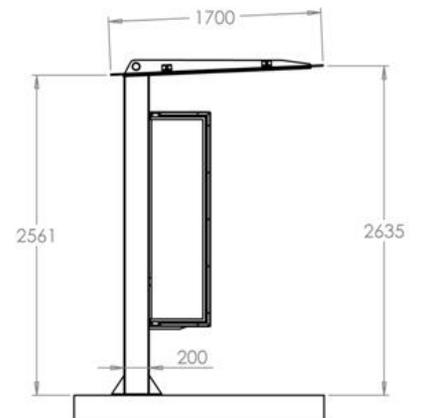

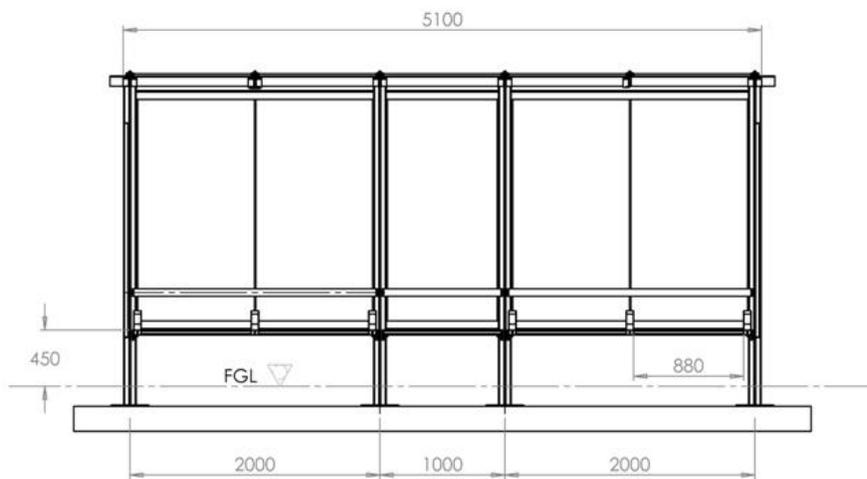

## Product Specification:

- Grade 316 Stainless steel construction
- Satin finish 320 grit polished & electro polished finish
- Integrated short stay seating
- Toughened glass roof and sides
- Modular system which can be easily extended

## Product Dimensions:

Reference	Height	Width	Diameter
Kent Waiting Shelter	6600mm	2475mm	1800mm

## Options:

---

Stainless Steel Grade	Finish	Cladding
304	Satin Finish 320 Grit Polished	Polycarbonate
316	Electropolished	Toughened and laminated glass
	Satin Finish 320 Grit Polished & Electropolished	

## Overview:

---

The Kent Waiting Shelter KWS6600 is constructed from 316 grade stainless steel. The main elements are constructed with a minimum 3mm thickness. The external finish is a satin finish 320 grit polished and electropolished finish. Despite the material's corrosion resistant properties some care is required to maintain a bright appearance. The conditions that the shelter is in (Inland or Coastal area), will greatly increase its need for cleaning and care.

## Maintenance:

---

### Stainless Steel:

Clean the stainless steel components using warm water with a mild detergent with a non abrasive cloth or sponge. Heavier stains may require the use of a nylon scouring pad or a stainless steel cleaner. To remove paint or graffiti use a cloth and Alkaline or solvent paint strippers according to type of paint. In the case of a bead blasted finish, where abrasive cleaning is required, always use a random circular rubbing action with a cloth. In the case of brushed finishes the surface consists of uniform fine 'scratches' running in one direction so where abrasive cleaning is required always use a straight back and forward rubbing action in the direction of the grain using soap and warm water. Rust spots or 'tea stains' can occur on the surface of the material, these are normally caused by contamination from ordinary mild steel, particularly in areas where construction work has been undertaken. Such stains can be removed using Rust Remover 410. In cases where the surface is severely stained as a result of severe environmental conditions or scratched due to misuse, it may still be possible to restore the original finish using chemicals such as Oxalic Acid solution. There are many stainless steel polishes available to enhance the surface finish. We recommend [Mister Stainless Ltd.](#) as a provider for stainless steel cleaning products
