

# Surface Protection - Product Code: Cleanroom Utility Storage Trolleys KCUST1000

## Product Specification:

- Suitable for cleanroom, sterile rooms, food processing and research areas
- No dirt traps
- Heavy Duty Construction
- Two braked swivel castors
- Three perforated shelves with raised edges

## Product Dimensions:

Reference	Height	Width	Depth
KCUST1000	1100mm	1000mm	675mm
KCUST1200	1100mm	1200mm	675mm

## Options:

---

Stainless Steel Grade	Finish	Shelves	Shelve type
304	Satin Finish 320 Grit Polished	2	Solid
316	Electropolished	3	Perforated
	Bead Blasted		
	Bead Blasted & Electropolished		
	320 grit polished & Electropolished		
	Powder Coated		

## Overview:

---

The Kent Stainless utility storage trolleys are designed to transport small materials and for short-term storage of utensils. Generally, the trolleys come with three perforated shelves with raised edges to protect against accidental spills.

The trolleys come fitted with cleanroom swivel castors, which ensure smooth, clean rolling.

## Maintenance:

---

### Stainless Steel:

Clean the stainless steel components using warm water with a mild detergent with a non abrasive cloth or sponge. Heavier stains may require the use of a nylon scouring pad or a stainless steel cleaner. To remove paint or graffiti (or light concrete splashes) use a cloth and alkaline or solvent paint strippers according to type of paint.

For Satin Finish Stainless try to follow the direction of the grain when cleaning vigorously or polishing. For Bead Blasted Finish use a circular motion.

Rust spots or 'tea stains' can occur on the surface of the material, these are normally caused by contamination from ordinary mild steel, particularly in areas where construction work has been undertaken.

Where contamination of the stainless has occurred from ordinary mild steel coming into contact with the stainless, use Rust Remover 410. In cases where the surface is severely stained as a result of severe environmental conditions or scratched due to misuse, it may still be possible to restore the original finish using chemicals such as Oxalic Acid solution. There are many stainless steel polishes available to enhance the surface finish. We recommend [Mister Stainless Ltd.](#) as a provider for stainless steel cleaning products
