Shoreditch Bin

DESCRIPTION

The Kent Shoreditch Litter Bin KSDLB730 is a 45 litre pole mounted stainless steel powdercoated litter bin. The bin has a simplistic design and it was for the public realm developments at Shoreditch, London. The bin is 920mm high above ground level and it has a 350mm diameter body. The galvanised liner is lifted vertically from this open top bin

FEATURES

- 304 Stainless Steel
- Powder Coated to Grey RAL 9007 colour or any RAL code
- 700mm Bin Height
- 350mm Diameter
- Decal Lettering and logos

Specification

Specify:

Kent Shoreditch Litter Bin KSLB350;

H:920mm, Dia:350mm; 45 Litre Capacity; Grade 316L Stainless Steel; Bright Satin Finish; Surface Mounted.

Include 'Litterman Symbol' Decal;

Choose your steel:

Grade 304 Stainless steel
Grade 316 Stainless steel

Choose your Finish

Bright Satin
320 Grit Satin Finish
Bright Peened
Shot Peened
Tiger Bronze
Imitation Corten
Antique Copper
Metallic Black

Choose your Decals;
Litterman
Recycling Symbol
Recycle Text
Custom Branding

Installation of Litter bins:

Ensure that the surface to which the bin is mounted is sufficiently strong.

Position the bin in the correct location. Mark the holes and drill into the surface

Place the bin directly over the holes and then fix the bin to the surface using M12 bolts.

There are 4 fixing points on the base for fitting to the ground using anchoring bolts

A typical foundation would be 750mm x 550mm x 550mm of 35N20 concrete - but this is the responsibility of the site engineer's specification

For Paved Areas:

Length of the M12 bolts will depend on the depth of the paver blocks plus bedding. For example, with 60mm deep paver blocks plus 20mm deep bedding, we recommend M12 X 180MM

For Non Paved areas:

M12 x 120mm bolts are recommended

CLEANING & MAINTENANCE

Clean the stainless steel components using warm water with a mild detergent with a non-abrasive cloth or sponge. Heavier stains may require the use of a nylon-scouring pad or a stainless steel cleaner.

To remove paint or graffiti use a cloth and Alkaline or solvent paint strippers according to type of paint. In the case of a bead blasted finish, where abrasive cleaning is required, always use a random circular rubbing action with a cloth. In the case of brushed finishes the surface consists of uniform fine 'scratches' running in one direction so where abrasive cleaning is required always use a straight back and forward rubbing action in the direction of the grain using soap and warm water.

Rust spots or 'tea stains' can occur on the surface of the material, these are normally caused by contamination from ordinary mild steel, particularly in areas where construction work has been undertaken. Such stains can be removed using Rust Remover 410.

In cases where the surface is severely stained because of severe environmental conditions or scratched due to misuse, it may still be possible to restore the original finish using chemicals such as Oxalic Acid solution.

There are many stainless steel polishes available to enhance the surface finish. We recommend Mister Stainless Ltd. as a provider for stainless steel **cleaning products**.
