

# Kent Light Rail Advertising Totem

# Kent Light Rail Advertising Totem KAT 4000

## Specify:

Kent Light Rail Advertising Totem KAT4000; 4000mm tall x 850mm diameter; Grade 316L Stainless Steel; Bright Satin Finish; Spigot Mounted for 2 stage installation.

The Kent Advertising Totem is an excellent revenue generator, as well as an easy way to transmit information to passengers, on a very small footprint. The cylindrical shape allows for 4 no. advertising posters and an integrated PID (passenger information display) system. Curved LED lighting backlights the posters while the illuminated top and bottom diffusers ensure the drum is highlighted at all times.

## Features:

- Mild steel and galvanised sub structure
- Integrated curved LED panels
- Grade 316L Stainless Steel flashings surrounding the doors and PID
- Integrated PID (passenger Information Display)
- Robust stainless steel locks, hinges and diffusers
- 2 stage installation

## Overview

The Kent Light Rail Advertising Totem KAT 4000 is an excellent revenue generator, as well as an easy way to transmit information to passengers, on a very small footprint. The cylindrical shape allows for 4 no. advertising posters and an integrated PID (passenger information display) system. Curved LED lighting backlights the posters while the illuminated top and bottom diffusers ensure the drum is highlighted at all times.

## Maintenance

### Stainless Steel:

Clean the stainless steel components using warm water with a mild detergent with a non-abrasive cloth or sponge. Heavier stains may require the use of a nylon-scouring pad or a stainless steel cleaner. To remove paint or graffiti use a cloth and Alkaline or solvent paints and strippers according to type of paint. In the case of a bead blasted finish, where abrasive cleaning is required, always use a random circular rubbing action with a cloth. In the case of brushed finishes the surface consists of uniform fine 'scratches' running in one direction so where abrasive cleaning is required always use a straight back and forward rubbing action in the direction of the grain using soap and warm water. Rust spots or tea stains can occur on the surface of the material, these are normally caused by contamination from ordinary mild steel, particularly in areas where construction work has been undertaken. Such stains can be removed using Rust Remover 410. In cases where the surface is severely stained because of severe environmental conditions or scratched due to misuse, it may still be possible to restore the original finish using chemicals such as Oxalic Acid solution. There are many stainless steel polishes available to enhance the surface finish. We recommend Mister Stainless Ltd. As a provider for stainless steel products.
