

Kent KPPC125—Permeable Paving Channel with Side Inlet.

The Kent Permeable Paving Channel KPPC125 with Side Inlet slots has been designed specifically for use in “level access” areas including **flat roofs, balconies, roof gardens and terraces**. The channel is **shallow** in depth with **perforated/slotted** sides to allow maximum ingress of water.

The Kent Permeable Paving channel is generally used in conjunction with Kent Stainless roof drains to **funnel and direct rainwater** to the roof drain or existing rainwater outlets.

This is particularly useful for areas of **permeable paving** and areas with decorative stone or gravel such as balconies.

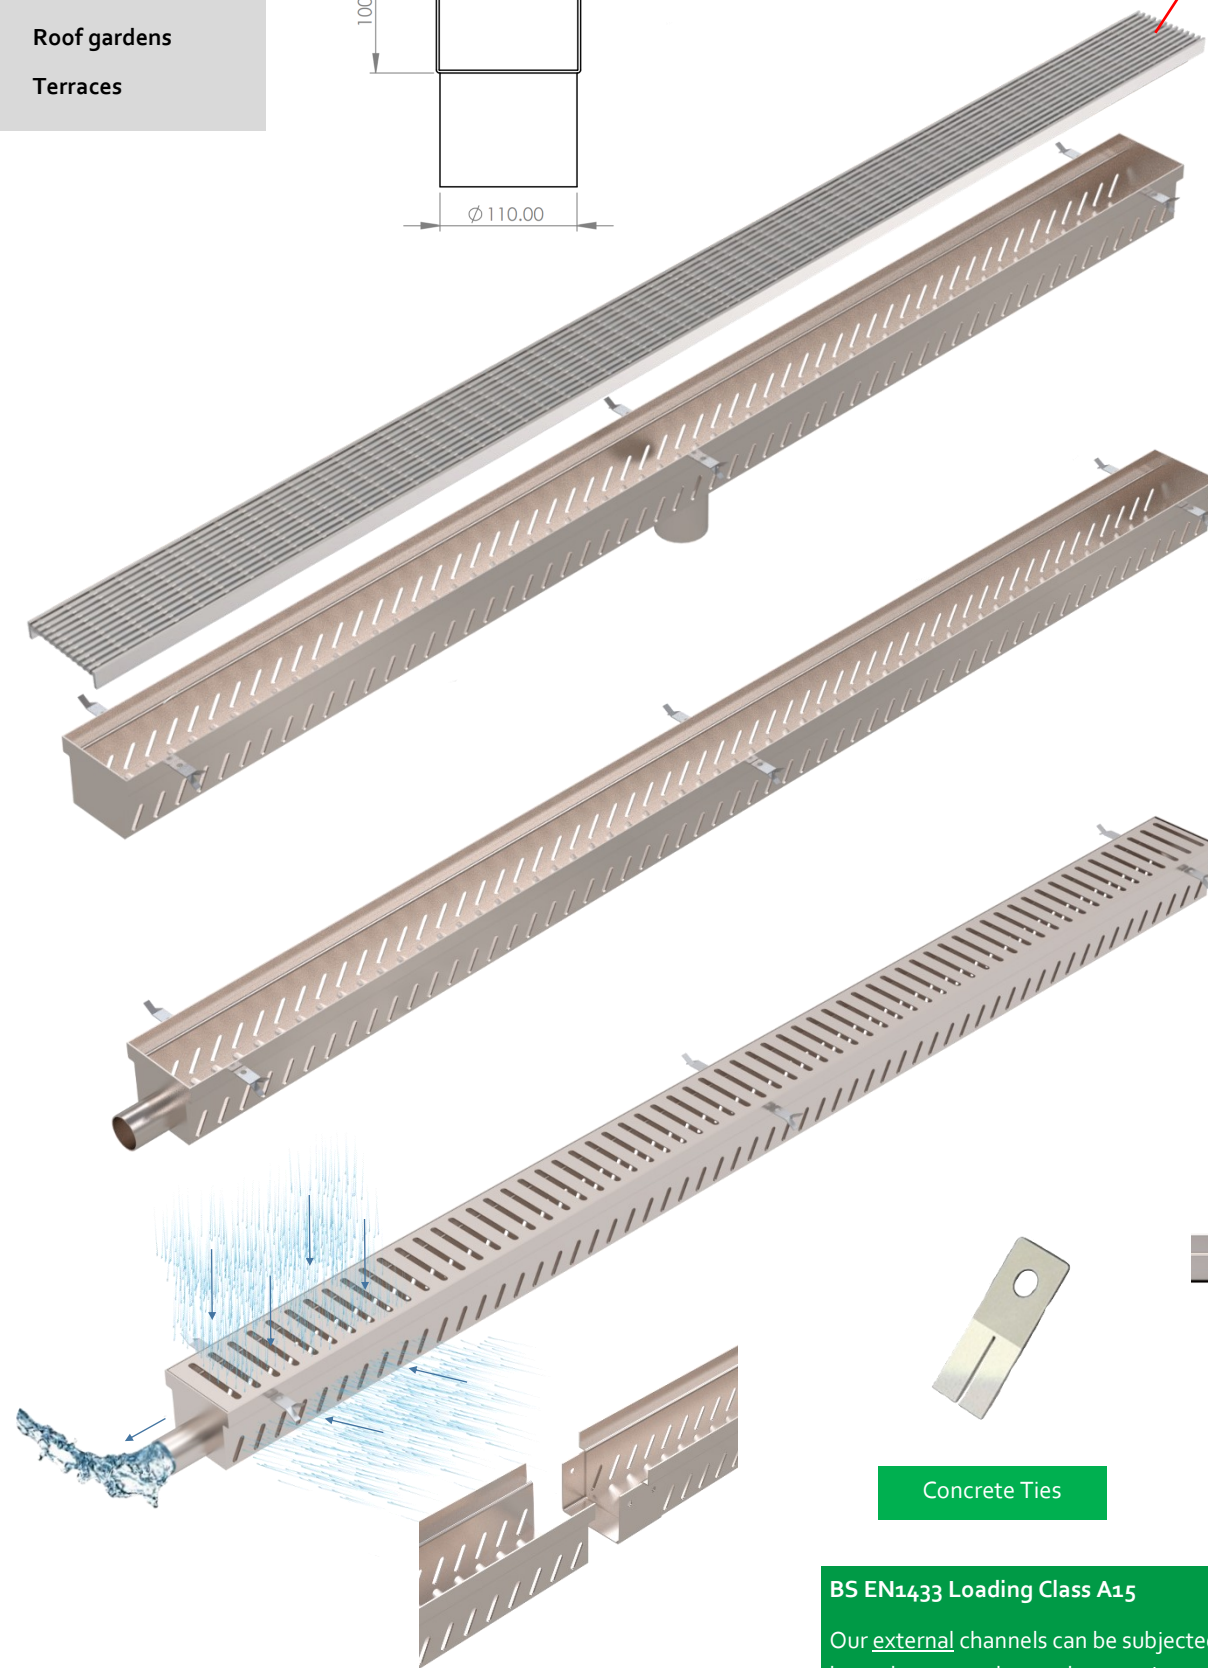

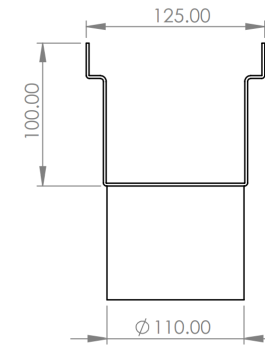

The channel is fully manufactured from stainless steel and is available in Grade 304 & 316L. It is supplied with fully welded end plates and joining brackets for easy on site installation. Kent Stainless’ full range of gratings can be used with the channel or a simple light duty perforated or slotted grating can be used where cost is an issue.

Features:

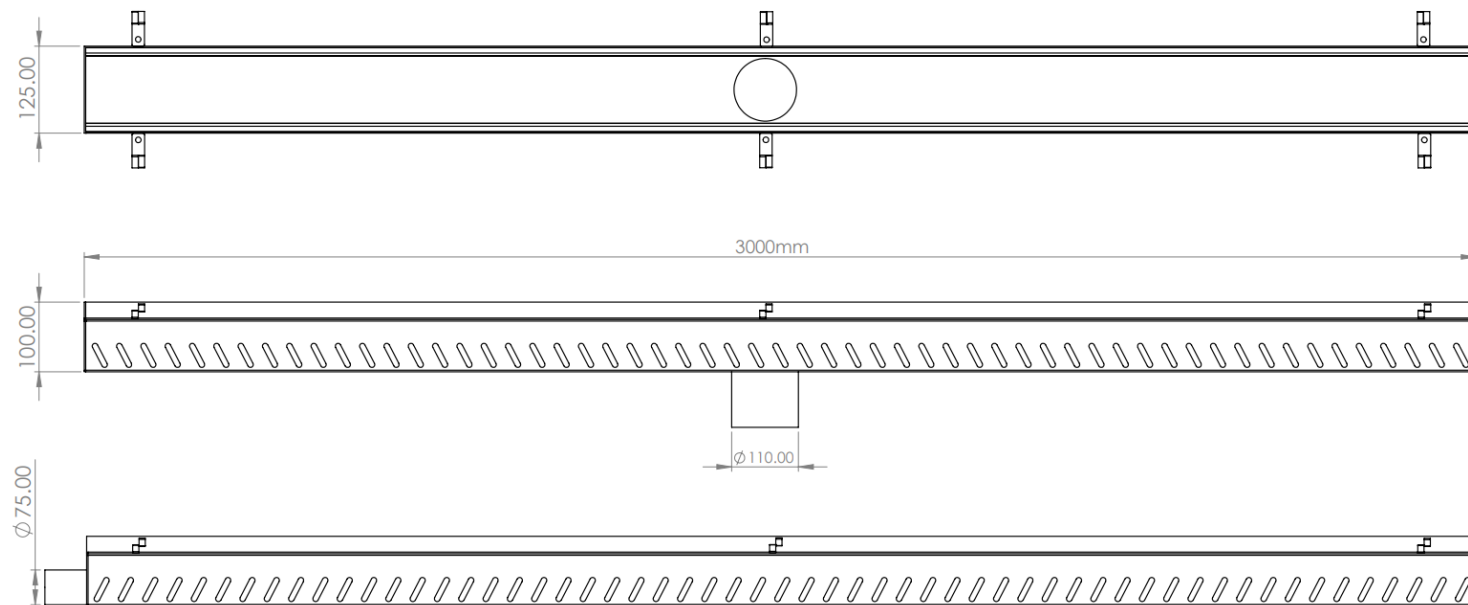

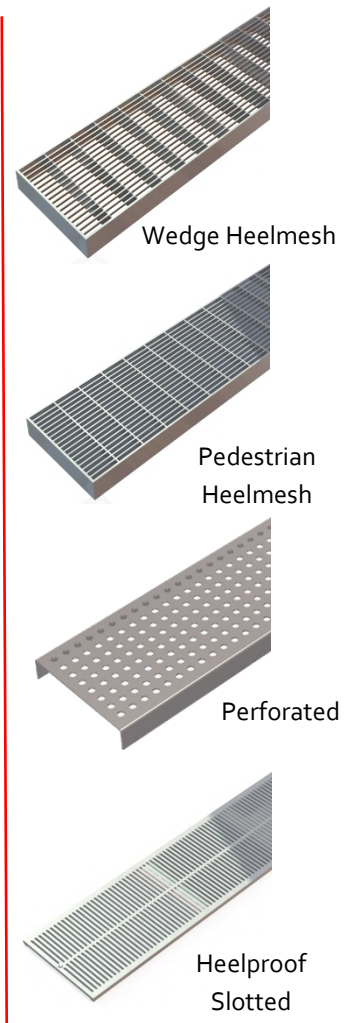

- Constant depth of 100mm
- Short lead time
- Low cost
- Lock down option available
- Throat and Collar connection as standard
- Untrapped outlet, 75mm as standard

Applications/Industries

- ◇ Flat roofs
- ◇ Balconies
- ◇ Roof gardens
- ◇ Terraces
