

CONTROL PANEL FOR AUTOMATIC POP UP DRAINS

The Kent Pneumatic Drain Control Panel KPDCP300 is a stainless steel control panel that sometimes accompanies our automatic pop up drains.

They regularly would be required for our Double Acting Cylinder Drains - often used where cleaners remotely pop open or close the drains at washdown time.

Occasionally they would also accompany our Single Acting Cylinder Drains. The Single Acting Cylinder Drains would still be controlled in an emergency by a sensor on a sprinkler system for example, but when these same drains are being cleaned or maintained this control panel can pop them open and shut. The 'Auto/Manual' switch shown controls this function.

While the graphic shown allows multiple drains to open or close by 1 button only, a larger control panel can have a series of buttons controlling each individual drain.
